SAMPLE REPORT — FICTIONAL DATA. The Harvest Table, Everham-on-Wye, every score, review excerpt, competitor name and finding in this document is invented. It exists only to show the structure of a real DayDine Position & Competitor Report. Your real report will contain actual, externally-verifiable data for your own venue.

Executive Summary

What you should fix now:

1. **Get your booking link in front of mobile users — most are bouncing** [FIX] — Capture demand you're losing in the discovery moment
2. **Lean into your Sunday lunch reputation — it's already what you sell** [EXPLOIT] — Sharpen the proposition the market already believes
3. **Protect your 4.4/5 Google rating — it's the discovery engine** [PROTECT] — Sustain inbound visibility

Watch this month:

- Tripadvisor rating (3.9) is materially below Google (4.4) — investigate why platforms diverge
- Two new direct competitors opened within 1.2 miles in the last 90 days

Do not prioritise: Pursuing editorial / awards coverage. Your fundamentals haven't earned amplification yet.

Overall score: 6.8 / 10 (baseline month — no prior comparison) | Strongest: Experience (7.8) | Weakest: Prestige (3.1)

Competitive position:
- Local Peers (5mi): #14 of 48 (P71) — peer avg 6.10, top 8.20
- Catchment (15mi): #22 of 95 (P77) — peer avg 5.95, top 8.41
- UK Category Cohort (Pub Dining, ££): #312 of 1,140 (P73)

This report uses publicly observable data only — no internal systems required. See Data Basis below for the full evidence breakdown.

Next 30 Days — Demand Forecast

PERIOD	SIGNAL	DRIVER	RECOMMENDED ACTION
1–6 Apr	YELLOW HIGH	School Easter holidays	Family menu and highchair availability visible on Google before 1 Apr
2–4 Apr	RED PEAK	Bank holiday: Good Friday	Confirm full opening hours are correct on Google and TripAdvisor
6–7 Apr	RED PEAK	Bank holiday: Easter Monday	Same — and pre-publish the bank holiday menu by 5 Apr
12–14 Apr	YELLOW HIGH	Local agricultural fair (Everham Showground)	Group bookings page should be a single click from your homepage
15–25 Apr	GREEN STEADY	School: summer term begins	—
26–30 Apr	YELLOW HIGH	Last weekend of month + payday Friday	Sunday-roast pre-orders open by Thursday

Biggest opportunity this month: Easter weekend (2–7 Apr) is your largest demand window. Your dominant segment — Couples & Occasion Diners — converts on confirmed pricing and a credible Sunday lunch promise. Make sure both are unmistakably visible from a phone before the period starts.

Financial Impact

Based on publicly observable data for The Harvest Table, current conversion friction is putting an estimated **8–24 covers per week** at risk — approximately **£640–£1,920 per month** in leaked revenue. The main drivers are: missing direct booking link from Google Maps; menu hosted as a PDF download (not crawlable, slow on mobile); and inconsistent opening hours between Google and your website. Acting on the first of these typically begins recovering covers within 2–3 weeks at zero cost.

METRIC	CURRENT	AT RISK	POTENTIAL RECOVERY
Covers per week (est.)	~310	8–24 at risk	Recoverable with profile fixes
Average spend per head	~£28	—	—
Weekly revenue impact	—	£160–£480	£160–£480 recoverable
Monthly revenue impact	—	£640–£1,920	£640–£1,920 recoverable
Annual projection	—	£7,680–£23,040	£7,680–£23,040 recoverable

Estimates use UK hospitality benchmarks for price level ££ venues. Ranges are directional — exact figures require your internal cover and spend data.

Recommended Action: Add a direct booking link to your Google Business Profile. Estimated cost: zero. Expected payback: within 1 month.

Operational & Risk Alerts

> This section flags issues that go beyond normal review themes — patterns that could create legal liability, operational failure, or reputational damage requiring direct action.

YELLOW Allergen Communication Risk

What we found: 2 reviews in the last 90 days reference allergen handling in language that suggests the customer was uncertain whether their requirement had been understood. Keywords detected: "wasn't sure if", "had to ask twice", "couldn't confirm gluten free".

Evidence:
- "...the staff were lovely but I wasn't sure if my coeliac request had actually been passed through to the kitchen. Had to ask twice..."
- "...couldn't confirm gluten free for the gravy so we played it safe. Probably fine but I wouldn't bet on it..."

Why this matters: Under Natasha's Law and the Food Information Regulations, allergen information must be communicated reliably. Customer uncertainty in reviews is the leading indicator of a process gap.

Recommended action: Audit your front-of-house allergen handover process this week. A printed allergen matrix at the pass eliminates ambiguity.

Data Basis

This report draws on three layers of evidence:

LAYER	WHAT	COUNT	CONFIDENCE
Deep analysis	Text reviewed, themes extracted, segments identified	38 reviews (22 Google, 16 Tripadvisor)	High for recent themes; moderate for long-term patterns
Aggregate signals	Rating and volume from all platforms	412 Google (4.4), 187 Tripadvisor (3.9)	High for reputation baseline; cannot identify specific themes
Structural data	FSA record, Google Business Profile, web presence, Companies House	4 sources	High — factual data

What this means: Narrative insights (themes, complaints, praise, segment reads) are based on 38 deeply-analysed recent reviews — a detailed sample, not a census. The aggregate 4.4 Google rating across 412 reviews is the reputation bedrock and is factored into scoring separately.

Platform note: Google (4.4) and Tripadvisor (3.9) diverge by 0.5 stars. Tripadvisor's smaller, more tourist-weighted sample tends to skew lower. Treat this as a signal that one or more recurring complaints land harder with one-off visitors than with locals.

Data Confidence: Moderate. Based on 38 reviews from 2 sources. Cross-source validation is possible. Findings are directionally robust but specific quote frequencies are illustrative.

Monthly Movement Summary

Seasonal Context

- **Everham-on-Wye — shoulder season.** Easter break is the first material demand window of Q2. Local agricultural fair (12–14 Apr) brings ~3,000 day-visitors into the town centre.
- The wider region is in low season for hotel occupancy — most demand is locally-driven; tourist conversion will spike sharply in mid-May.

This is the first report with month-over-month tracking. All metrics are baselined. Next month's report will show deltas, trends, and movement context.

What This Venue Is Becoming Known For

The Harvest Table is a well-established gastropub with a strong locally-anchored reputation — 4.4/5 across 412 Google reviews. That review volume means the reputation is earned, not manufactured.

Tripadvisor shows 3.9/5 across 187 reviews — a meaningful 0.5-star gap to Google. Tripadvisor's audience skews tourist; the gap suggests one-time visitors are encountering a friction Google's locally-weighted audience does not.

From deep analysis of 38 recent reviews:

Guest feedback supported by strong evidence centres on **Sunday roast quality** (14 mentions), **service warmth** (11 mentions), and **value for money** (9 mentions). These three themes recur across both platforms and are the venue's de facto brand promise — whether that's how the operator thinks about it or not.

Within the local pub-dining cohort (47 peers in a 5-mile radius), the venue ranks #14. The identity is "the Sunday lunch place" — a category leadership position that is monetisable but also fragile. Sunday lunch leaders who slip on the headline dish lose their identity within 2–3 review cycles.

Who's Telling You What — Guest Segment Intelligence

Different guests experience your venue differently. Here's what each group is telling you.

Data basis: 21 of 38 reviews (55%) contained enough context to identify the guest type. Segments below require at least 2 reviews to surface a pattern.

Couples & Occasion Diners (8 reviews)

What they value: Sunday roast (5x) — "absolutely the best beef we've had in months, perfect crackling on the pork"; Service warmth (4x) — "the team made our anniversary feel genuinely special, no fuss"; Atmosphere (3x) — "low ceilings and proper firelight, exactly what we wanted"

Where you lose them: Bar wait times on Saturday evening (2x) — "twenty minutes for two glasses of wine, that wasn't great"

Commercial read: Occasion diners have high expectations and long memories. A great experience generates word-of-mouth; a disappointing one generates damaging reviews. This is your highest-value segment by spend per cover and they currently rate the experience strongly — protect this above all else.

Families with Young Children (5 reviews)

What they value: Children's portions (3x); Highchair availability (2x); Garden access in good weather (2x)

Where you lose them: Long wait between courses (2x) — "by the time the mains arrived our toddler had completely melted down"; No clear kids' menu visible online before booking (1x)

Commercial read: Families book on certainty, not surprise. Publishing the kids' menu to Google would convert browsing parents that currently bounce. Speed of service is a structural priority for this segment — three courses in 75 minutes or you lose them next time.

Tourists & One-time Visitors (4 reviews)

What they value: Building character (3x) — "a properly old village pub, exactly what we'd hoped to find"; Local sourcing story (2x)

Where you lose them: Difficulty finding (2x) — "satnav took us to the wrong end of the village"; Tripadvisor rating mismatch (1x) — "Google said 4.4 but Tripadvisor said 3.9 so we nearly skipped it"

Commercial read: Tourists discover you online with no prior loyalty. Your listing, your first three reviews, and your platform-rating consistency are the entire decision basis. The Tripadvisor gap is actively costing you tourist conversion right now.

Locals & Regulars (4 reviews)

What they value: Consistency (3x); Value at lunch (2x); Knowing the staff by name (2x)

Where you lose them: Sunday lunch booking pressure (1x) — "used to be able to walk in, now you have to book three weeks ahead which kind of breaks what made it ours"

Commercial read: Regulars are your revenue baseline. They tolerate minor issues but notice declining consistency. The Sunday lunch booking pressure is a positive symptom of demand but creates a relationship risk with locals — consider holding back a small allocation of walk-in tables for known regulars on quieter Sundays.

Segment Tensions

These segments have conflicting needs. Managing the tension is more valuable than ignoring it.

Discovery vs Retention: Tourists need online proof to choose you. Locals need a sense of ownership to stay. The Tripadvisor gap is a discovery problem; the Sunday booking pressure is a retention risk. Both need handling, and the right answer is different for each.

Watch List (single-review signals — not yet patterns)

- 1 review suggests **Cyclists / Sunday riders** may be present — "a perfect post-ride lunch stop, would absolutely come back on the bike"
- 1 review references **gluten-free uncertainty** — already escalated under Operational Alerts above

Unattributed Reviews (17)

Top themes across unattributed reviews: Sunday roast (9x), Service warmth (7x), Value (5x), Atmosphere (5x), Speed of service (3x).

As review volume grows, more segments will become readable.

Management Priorities

The score is solid but not dominant. The management question is which specific lever, if pulled, would most change your commercial trajectory — and which can you realistically move?

Priority 1: Get your booking link in front of mobile users [FIX | ESCALATED]

You deliver a strong Sunday lunch experience, but a mobile customer landing on your Google Business Profile cannot book in fewer than three taps. Each click in a discovery flow costs ~20% of intent. Today, you are leaking covers in the moment of strongest intent.

Management implication: Strong product, weak conversion path, high opportunity cost.

- **Owner:** operations | **Confidence:** 85%
- **Expected upside:** Capture demand you're losing in the discovery moment
- **Evidence:** `gbp_completeness=7/10, booking_link=missing, conversion=5.9`

Commercial consequence (directional): Value at stake: £640–£1,920/month | Cost to fix: zero (profile update) | Payback: < 1 month
Basis: missing booking link from GBP typically leaks 4–8% of demand; for a venue your size that converts to ~8–24 covers/week
- **Segment impact:** Tourists and theatre/event-goers are most likely to book in the discovery moment with a hard time constraint. This single fix disproportionately recovers those two groups.

Priority 2: Lean into your Sunday lunch reputation [EXPLOIT | ESCALATED]

Guests consistently praise the Sunday roast (14 mentions across 38 reviews). This is what the venue actually sells, whether or not it's how you describe yourself. Make it the headline of your online presence — homepage hero, Google Posts, Instagram bio.

Management implication: Your guests are telling you your proposition. Use it.

- **Owner:** management | **Confidence:** 75%
- **Expected upside:** Sharpen proposition, attract higher-intent guests
- **Evidence:** `review_praise: Sunday Roast=14, Service Warmth=11, Value=9`

Commercial consequence (indicative): Value at stake: upside, magnitude depends on execution | Cost to fix: low (under 2 hours, no spend) | Payback: 1–3 months
Basis: aligning online messaging to guest-validated strengths sharpens conversion in a measurable way within one review cycle
- **Segment impact:** Couples and occasion diners — your highest-value segment — already rate this strongly. Reinforcing it converts the next cohort of similar guests.

Priority 3: Protect your 4.4/5 Google rating [PROTECT | ESCALATED]

With 412 Google reviews at 4.4/5, your discovery advantage is substantial. Protect it by responding to every review within 48 hours and prompting satisfied tables for feedback at the right moment (after dessert, not at the door).

Management implication: Visibility drives discovery. A venue that isn't found can't convert. Typically moveable within 60 days.

- **Owner:** front-of-house | **Confidence:** 80%
- **Expected upside:** Sustain discovery advantage; close the Tripadvisor gap
- **Evidence:** `gr=4.4, grc=412, ta=3.9, tarc=187, divergence=0.5`

Commercial consequence (indicative): Value at stake: commercial impact compounds over weeks | Cost to fix: low | Payback: 1–3 months
Basis: review-response rate is one of the strongest proxies for management attention and is correlated with sustained rating across the dataset.
- **Segment impact:** Tourists and first-time visitors depend entirely on your online presence. Protecting visibility and closing the Tripadvisor gap protects your discovery pipeline.

Protect / Improve / Ignore

Protect

- **Sunday lunch identity.** It's the engine. Don't let it drift. Same chef on Sundays, same beef supplier, same pricing every week.
- **412-review Google rating.** Years to build, weeks to lose. Respond to every review.

Improve

- **Mobile conversion path.** Booking link, machine-readable menu, hours that match the website. Each missing element is lost footfall.
- **Tripadvisor rating gap.** Investigate the recurring complaints from one-off visitors. Likely a small set of fixable issues.

Ignore

- **Editorial / awards pursuit.** Your fundamentals haven't earned amplification yet. Awards don't fix a weak proposition; they amplify a strong one. Revisit in 6 months once Priority 1 has been actioned.

Demand Capture Audit

3 of 7 demand-capture dimensions are clear. **3** have friction. **1** is broken.

First audit — all dimensions baselined for next month's comparison.

Conversion dimension score: 5.9/10 — this audit explains what is behind that number.

Booking Friction [BROKEN]

No direct booking link is present in your Google Business Profile. A customer must leave Google Maps, search for your website, locate the booking page (currently three clicks deep), and then enter their details. Each step in a booking flow loses ~20% of intent.

Commercial consequence: Customers searching "Sunday lunch near me" expect 1-click booking. Without it, you lose to competitors with Reserve with Google or a visible booking button. This is your single largest conversion leak.

Signals: GBP type includes 'restaurant' (reservation expected); Website present (booking page found, three clicks deep); No Reserve-with-Google partner detected

> "tried to book on the phone in the car park, gave up after a couple of minutes and went somewhere else"

Menu Visibility [PARTIAL]

A menu exists online but it is hosted as a downloadable PDF, not as crawlable HTML. 77% of diners check the menu before visiting; if it is buried in a PDF, the majority will not see it.

Commercial consequence: A menu that exists but isn't in the discovery path loses most of its conversion value. Mobile users in particular abandon when a PDF starts loading.

Signals: Menu present (PDF, hosted on website); Not crawlable as HTML; 9 reviews mention checking the menu before visiting

CTA Clarity [CLEAR]

GBP profile is 7/10 complete. Critical action paths (call, directions, website) are populated.

Commercial consequence: No CTA friction detected.

Signals: GBP completeness 7/10; Phone, directions, website present

Photo Mix & Quality [PARTIAL]

14 photos present — slightly below the peer average of 18. Photos lean heavily towards exterior and interior shots; food photography is under-represented (3 of 14 photos).

Commercial consequence: Reviews praise the Sunday roast as your headline product, but your photo mix doesn't showcase it. The strongest conversion signal in your listing is muted.

Signals: Photo count 14 vs peer avg 18; Food photo share 21% vs peer avg 44%; Top review theme: Sunday Roast

Proposition Clarity [CLEAR]

Google types ("gastropub", "restaurant", "pub") match guest praise themes (Sunday roast, service warmth, atmosphere). No proposition mismatch.

Commercial consequence: No friction detected.

Mobile Usability [PARTIAL]

Opening hours are present but inconsistent between Google (Mon–Sun 12:00–22:00) and your website (varies by day). Mobile users encountering this contradiction lose trust.

Commercial consequence: Inconsistent hours are a top-three reason for last-minute booking abandonment in our dataset. A customer who acts on bad data and hits a wall does not come back.

Signals: Hours mismatch detected between Google and website

Promise vs Path [CLEAR]

Reviews and listing both centre on Sunday roast and gastropub experience. No contradiction between what is promised and what is delivered.

Commercial Diagnosis

Primary Constraint

Conversion path, not product. The Harvest Table delivers a strong Sunday lunch experience that guests actively endorse across two review platforms and 599 combined reviews. What is holding the venue back is not the food, service, or reputation — it is the path between a customer's intent and a confirmed booking. Each missing operational signal (direct booking link, crawlable menu, consistent hours) is a percentage of potential customers who never arrive.

Secondary Drag

The 0.5-star gap between Google (4.4) and Tripadvisor (3.9) is a secondary drag on discovery. Tripadvisor's audience skews toward one-off tourist visitors, and the lower rating means those visitors are filtering you out before they reach the door. This is not a food quality problem — it is a mismatch between what tourists expect from a village gastropub and what the current listing communicates.

Hidden Risk

The operational alert around allergen handling (two reviews in the last 90 days using hedging language) is a hidden risk. It has not become a rating problem yet, but customers are writing about their uncertainty publicly, and under current food information law, uncertainty itself is evidence of a process gap. Address before it escalates.

What May Be Misleading

- **Strong Sunday identity can mask weekday underperformance.** Review volume and praise cluster heavily on Sunday lunch. Weekday covers are almost certainly softer than the headline suggests — but current public data cannot confirm by how much.
- **Your Tripadvisor rating is lower than Google, but the volume is smaller (187 vs 412).** Don't over-index on one platform in isolation; the Google data is the more reliable baseline.
- **The venue ranks #14 locally but the gap to #11 is only 0.6 points.** Small movement on conversion moves you meaningfully up the table. Don't read the rank as stable; it is a conversion-path away from changing.

Positioning

Local category leader on Sunday roast. Credible mid-market gastropub for couples, families and occasion diners. Identity is earned on the plate, but under-marketed online. The fix is amplification of an already-true story, not invention of a new one.

Revenue Left on the Table

- **Direct booking friction.** Customers who find you on Google Maps cannot book without leaving the app. Estimated leak: 8–24 covers/week, £640–£1,920/month.
- **Menu buried in a PDF.** 77% of diners check the menu before visiting; your menu exists but is not crawlable. Estimated leak: hard to size without internal data, but directionally similar to booking friction.
- **Hours inconsistency between Google and your website.** Last-minute booking abandonment leak. Estimated: a handful of covers per week — small individually but compounds monthly.
- **Under-marketed Sunday lunch story.** You could charge more on Sundays and likely would not lose covers; guests already perceive the experience as worth more than £28/head. Estimated upside: £0.50–£2.00/head uplift without churn.

4 revenue leaks identified. The first three are fixable at zero cost (profile updates and website consistency). Combined directional value at stake is £7,700–£23,000 per year. Exact figures require internal cover/spend data.

Review & Reputation Intelligence

Reputation baseline: 38 reviews analysed (22 Google + 16 Tripadvisor), aggregate over 599 reviews across both platforms. This is the deep-analysis sample used to extract themes and segments — it is larger than the Operational & Risk Alerts inputs because it pulls from a longer window.

What Guests Value Most

Sunday roast quality is the dominant theme (14 mentions in 38 reviews; 37% of sampled reviews). Guests describe specific elements — the beef, the crackling on the pork, the Yorkshire puddings, the gravy — not generic praise. Dish-specific praise is the strongest commercial signal available in public reviews because it reflects memory formation, not reflex rating. As one reviewer put it: "absolutely the best beef we've had in months, perfect crackling on the pork, and the Yorkies were honestly the best thing on the table"

Service warmth is the second dominant theme (11 mentions). Guests name individual staff in several reviews — "Emma", "Tom behind the bar", "the young woman with the short hair". When reviewers name staff, the venue's competitive advantage is human rather than purely operational, which has implications for both resilience (lose key staff and the proposition weakens) and scaling (the advantage is hard to replicate at a second site). As one reviewer put it: "the team made our anniversary feel genuinely special, no fuss, just attentive without hovering"

Value for money is the third theme (9 mentions). Guests consistently frame the experience as "good value at the price" rather than "cheap" — which is the healthier version of the value theme. Value-for-money praise at the £25–£30/head band protects against both discount competitors and premium alternatives.

What This Means for the Proposition

The review evidence suggests this venue's real proposition is built on **Sunday Roast, Service Warmth, and Value**. When a roast-led gastropub combines all three, the venue is selling an occasion (Sunday lunch with the family or close friends), not a meal. Pricing power, loyalty and resilience to competition are typically stronger for occasion-led venues than for food-led venues.

What Management May Be Missing

Bar wait times on Saturday evenings (recurring note, 2 mentions).

> "twenty minutes for two glasses of wine, that wasn't great"
> This sits below the threshold of an operational alert but warrants attention. Saturday evenings are a high-margin period. Two reviews in the sample complaining about bar wait times strongly suggests a process or staffing gap, not a one-off.

Sunday booking pressure (locals feeling squeezed out) (1 mention).

> "used to be able to walk in, now you have to book three weeks ahead which kind of breaks what made it ours"
> Single-signal and not yet a pattern, but worth monitoring. Locals who feel edged out of their own local pub become the source of the most damaging reviews. Consider holding back a small walk-in allocation.

Tripadvisor / Google rating mismatch commentary (1 mention).

> "Google said 4.4 but Tripadvisor said 3.9 so we nearly skipped it"
> A tourist reviewer explicitly called out the platform gap as a near-miss. This is rare — most customers who filter you out on platform ratings do not write about doing so. One explicit mention strongly implies many silent misses.

Evidence Quality

Confidence: Moderate (22 Google, 16 Tripadvisor). Cross-platform evidence strengthens confidence. Themes corroborated across both platforms (Sunday roast, service warmth, value) are high-confidence. Single-platform themes (bar wait times only on Google; booking pressure only on Tripadvisor) are directional.

Recent Movement

Reviews covering the 90-day window have a consistent tone — no abrupt rating drop, no sudden theme shift. The 4.4 Google rating is stable across the last 40 reviews. No red-flag early-warning signals in the most recent five reviews.

Menu & Dish Intelligence

What Guests Are Ordering and Mentioning

DISH / ITEM	MENTIONS	SENTIMENT
Sunday roast (beef)	9	Positive
Sunday roast (pork crackling)	5	Positive
Yorkshire pudding	4	Positive
Fish pie	3	Positive
Sticky toffee pudding	3	Positive
Steak & ale pie	2	Positive
Gluten-free gravy	2	Uncertain — see Operational Alerts
Side of greens	1	Negative (overcooked)

Extracted from the 38-review deep-analysis sample. Items mentioned only once are omitted unless sentiment is materially negative.

What's Trending in Your Category (Gastropub, UK, 2026)

- Provenance storytelling — named farms, butchers and growers — is increasingly a differentiator in the £25–£35/head gastropub segment.
- Non-alcoholic premium options (botanical sodas, craft zero-beer, house-mixed zero-spirit cocktails) are appearing in positive reviews with rising frequency.
- Walk-in policy is resurgent as a market signal: venues that retain a walk-in capability alongside bookings are mentioned positively more often than pure-booking venues.
- Dog-friendly seating remains a strong positive signal across UK gastropub reviews, particularly in rural and village settings.
- Kids' menus that are distinct from "half-portion adult mains" (small plates for small people, not a shrinking) are gaining traction.

Opportunity gap: Category trend — provenance storytelling: growing fast in UK gastropub reviews. No guest mentions detected in your current review sample. If your Sunday roast sources locally, saying so — on the menu, on Google Posts, on Instagram — converts provenance-aware diners who are currently filtering you out.

Opportunity gap: Category trend — non-alcoholic premium options: growing fast. No guest mentions detected. If your current bar menu includes these, make them visible; if not, two or three well-chosen options would close the gap without kitchen complexity.

Public Proof vs Operational Reality

This section compares what customers see (public signals) against what the data reveals about operational depth.

ASPECT	PUBLIC SIGNAL	OPERATIONAL REALITY
Customer Rating	4.4/5 Google (Strong)	Experience 7.8/10 (Strong) — Aligned
Hygiene Rating	FSA 5/5 (Top mark)	Trust 7.4/10 (Adequate)
Review Volume	599 reviews across platforms (High)	Visibility 6.2/10 (Partial — see below)
Booking / Ordering	Customers cannot book in 1 click	Conversion 5.9/10 (Weak)
Cross-Platform Rating	0.5-star gap Google vs Tripadvisor	Suggests friction in tourist experience

Read: Experience and Trust are aligned with public proof. Visibility is weaker than the review volume alone would suggest because photo mix is under-indexed on food (the headline product). Conversion is materially weaker than public proof — the most important gap.

Category & Peer Validation

Why This Venue Is In This Cohort

The Harvest Table is classified as **Gastropub / Village Dining** (confidence: high). Google's raw category is "pub" but the resolved category triangulates across five signal sources.

Category Evidence

SIGNAL SOURCE	CATEGORY SIGNAL	WEIGHT
Google Place Types	pub, restaurant, gastropub	Primary
Review Language	"pub" (14x), "gastropub" (9x), "restaurant" (5x), "Sunday lunch" (14x)	Strong
Service Model	table service (18x), Sunday booking (11x), reservation (6x)	Supportive
Price Level	££ (2/4) — casual dining	Supportive
Name	"The Harvest Table" — food-forward, non-brewery	Supportive

Resolved category: Gastropub / Village Dining (confidence: high)

Alternative considered: Pub / Bar — rejected because review language overwhelmingly frames the visit as a meal occasion (Sunday lunch, booking, table service), not a drinks occasion.

Peer Justification

- **[Sample Competitor — Riverside Inn]** (7.4): Gastropub, similar price band, 1.4 miles
- **[Sample Competitor — The Coopers Arms]** (7.2): Gastropub, comparable price band, 0.9 miles
- **[Sample Competitor — Old Mill House]** (7.0): Gastropub with rooms, 2.1 miles (marginal comparator — the rooms operation serves different occasion types)
- **[Sample Competitor — The White Hart]** (6.6): Gastropub, 3.4 miles
- **[Sample Competitor — The Granary Kitchen]** (6.4): Modern gastropub, 1.8 miles

Sensitivity: What Changes If Categorisation Changes

If reclassified as "Pub / Bar": Peer set expands from 47 to 74 local competitors (more wet-led pubs). Position shifts from #14 of 48 to approximately #22 of 75. Dimension gaps narrow because wet-led pubs score lower on Experience and Conversion.

Competitive conclusions are robust — whether classified as gastropub or pub, The Harvest Table sits in the upper-middle of its local market, and the conversion gap is the binding constraint in both classifications.

Competitive Market Intelligence

Local market: 47 direct competitors identified within 5 miles.

You are in the 71st percentile locally (P71). The competitive risk here is not complacency — you are not the leader — but stagnation. Three venues directly above you (#11 to #13) lead on Conversion, not Experience. That means the gap is closeable within one review cycle without changing the product.

Where you lead: Experience (+1.2 above peer avg), Trust (+0.6)
Where peers beat you: Conversion (-0.8), Visibility (-0.4)

Two recent openings are worth monitoring:

- **[Sample Competitor — The Harvest Lodge]** (opened Feb 2026, 0.8 miles). Direct conceptual overlap on the "harvest / farm-to-table" positioning. Currently ranked #34 but climbing; 4.6 Google rating across 47 reviews.
- **[Sample Competitor — Cleyford Tavern]** (opened Mar 2026, 1.2 miles). Broader gastropub offering, ranked #41 today. Less direct overlap but absorbs walk-in lunch trade.

Market Position

Category: Gastropub / Village Dining

Local Competitive Set (47 peers within 5 miles)

Position: #14 of 48 (Percentile 71)

You are in the upper third of this peer set. Your overall score of 6.8 exceeds the peer average of 6.1 by 0.7 points but sits 1.4 points below the top performer (8.2). The competitive risk is stagnation — three venues directly above you lead on conversion, not on product.

Dimension gaps vs peers:

- Experience: 7.8 (+1.2 above peer avg 6.6)
- Trust: 7.4 (+0.6 above peer avg 6.8)
- Visibility: 6.2 (-0.4 below peer avg 6.6)
- Conversion: 5.9 (-0.8 below peer avg 6.7)
- Prestige: 3.1 (+1.2 above peer avg 1.9)

Closest competitors:

- [Sample Competitor — Riverside Inn] (7.4) — they lead by 0.6
- [Sample Competitor — The Coopers Arms] (7.2) — they lead by 0.4
- [Sample Competitor — Old Mill House] (7.0) — they lead by 0.2
- [Sample Competitor — The White Hart] (6.6) — you lead by 0.2
- [Sample Competitor — The Granary Kitchen] (6.4) — you lead by 0.4

Competitor Strategy

Common pattern: Multiple local competitors lead you on **conversion**. This is your most consistent competitive gap — addressing it would improve your position against the field, not just one rival.

[Sample Competitor — Riverside Inn] (signal-backed)

- **Wins on:** Conversion (+1.8), Visibility (+0.6)
- **Why it matters:** A combined lead on booking path and discoverability means they capture the same intent you generate — before you have a chance to convert it. This is a structural disadvantage.
- **Copy / test:** Reserve with Google integration (they have it, you don't). Menu hosted as crawlable HTML (they have it, you don't). Opening hours consistent across Google, website and Instagram (they have it, you don't).
- **Defend:** Your Experience (+0.4) and Trust (+0.5) are stronger. If a guest arrives at your venue, they rate you higher. The battle is upstream of the door.

- Based on Google rating/reviews, FSA record, 4 dimension scores, GBP completeness audit

[Sample Competitor — The Coopers Arms] (signal-backed)

- **Wins on:** Conversion (+1.4)
- **Why it matters:** Same structural issue as Riverside Inn but less pronounced. One Reserve-with-Google integration would close most of the gap.
- **Copy / test:** Direct booking link in GBP. Recent photos refreshed monthly (theirs are weekly).
- **Defend:** Your food quality theme strength is ahead of theirs (review sentiment on Sunday roast is materially stronger on your reviews).
- Based on Google rating/reviews, FSA record, 4 dimension scores

[Sample Competitor — Old Mill House] (signal-backed)

- **Wins on:** Visibility (+0.9), Prestige (+1.4)
- **Why it matters:** They have a local food award (AA one-rosette equivalent), which compounds Visibility and Prestige. Awards amplify a strong proposition but do not substitute for one.
- **Copy / test:** Their award came through a consistent 18-month local sourcing story. If your fundamentals support this, it's a realistic 12-month target.
- **Defend:** Your price point (£28/head) is materially below theirs (£42/head). Different guest, different occasion, not a pure substitute.
- Based on Google rating/reviews, FSA record, 4 dimension scores, editorial collection

Extended Catchment (95 peers within 15 miles)

Position: #22 of 95 (Percentile 77)

You are in the top quartile of the wider catchment. Your overall score of 6.8 exceeds the catchment average of 5.95 by 0.85 points. The story is the same as in the local set: Experience and Trust lead, Conversion drags.

Closest competitors:

- [Sample Competitor — The Old Vicarage] (7.1) — they lead by 0.3
- [Sample Competitor — Riverside Inn] (7.4) — they lead by 0.6
- [Sample Competitor — Brambleford Inn] (7.2) — they lead by 0.4
- [Sample Competitor — The Coopers Arms] (7.2) — they lead by 0.4
- [Sample Competitor — The Old Parsonage Kitchen] (7.0) — they lead by 0.2

UK Category Cohort

Within the UK Gastropub / Village Dining national cohort (1,140 venues), The Harvest Table ranks #312 of 1,140 (Percentile 73). Positioning is consistent across local, catchment and national views — a reassuring sign that the local reading is not an artefact of a thin peer set.

Dimension Scorecard

DIMENSION	SCORE	Δ	PEER AVG	GAP	READ
Experience	7.8	—	6.6	+1.2	Clear strength
Visibility	6.2	—	6.6	-0.4	Slightly below peers
Trust	7.4	—	6.8	+0.6	Modest strength
Conversion	5.9	—	6.7	-0.8	Weak — binding constraint
Prestige	3.1	—	1.9	+1.2	Modest strength
Overall	**6.8**	**—**	**6.1**	**+0.7**	

Prestige (editorial recognition) is tracked but not a headline operational lever for most independents. The +1.2 gap is statistically meaningful but commercially secondary to Conversion.

Dimension-by-Dimension Diagnosis

Experience — 7.8 / 10

Customer-facing quality — food, service, ambience as perceived by guests

Assessment: Strong. A genuine competitive strength at 7.8. You lead peers by 1.2 points (peer avg 6.6).

Why it matters: Experience drives reviews, repeat visits and word-of-mouth. The most commercially impactful dimension, particularly for occasion-led venues.

Driven by: Google rating (4.4), Tripadvisor rating (3.9), FSA food hygiene sub-score (Good), positive sentiment across Sunday roast, service warmth and value themes.

Management note: Strong experience, but peers are within closing distance. The last 10 reviews matter more than the aggregate — monitor for drift, particularly on the Sunday roast as it carries a disproportionate share of your identity.

Visibility — 6.2 / 10

How easily customers can discover you online

Assessment: Partial. At 6.2, functional but underpowered. You trail peers by 0.4 points (peer avg 6.6).

Why it matters: No visibility = no new customers. Controls top-of-funnel demand generation. For occasion-led venues, visibility is critical on the weekly decision cycle (couples choosing where to eat on Saturday night).

Driven by: Google review count (412), photo count (14 vs peer avg 18), GBP completeness (7/10), web presence (website + FB + IG), Tripadvisor presence (187 reviews).

Management note: Your review count is healthy but the photo mix is skewed away from food (3 of 14 are food photos; peer average food share is 44%). Your headline product — Sunday roast — is under-represented in the visual discovery channel. Fix: add 8 food-led photos (Sunday roast, fish pie, sticky toffee) over the next two weeks.

Trust — 7.4 / 10

Food safety compliance and regulatory confidence

Assessment: Modest strength. At 7.4, this is above peer average but not a clear differentiator. You lead peers by 0.6 points (peer avg 6.8).

Why it matters: A hygiene rating below 5 is visible to customers. Low trust creates a hard ceiling on overall score. Strong trust is the floor, not the differentiator.

Driven by: FSA hygiene rating (5/5), structural compliance (Good), management confidence (Good), inspection recency (last inspected ~5 months ago — fresh).

Management note: See Trust — Behind the Headline below for full decomposition.

Conversion — 5.9 / 10

Operational readiness to capture demand

Assessment: Weak — binding constraint. At 5.9, this dimension is actively limiting your overall position. You trail peers by 0.8 points (peer avg 6.7).

Why it matters: Converts interest into visits. Missing hours/menu/booking options cause drop-off at purchase intent. This is where you are losing the weekly decision cycle.

Driven by: Opening hours present but inconsistent between Google and website, menu hosted as PDF (not crawlable), no Reserve-with-Google integration, booking page three clicks deep.

Management note: This is your primary commercial lever. Every item in the Demand Capture Audit that flagged PARTIAL or BROKEN contributes here. Sequence: booking integration first (biggest leak), menu as HTML second, hours consistency third.

Prestige (Editorial Recognition)

Score: 3.1 / 10 | Peer avg: 1.9

You sit above peer average on prestige (1 local award / 1 directory listing in the last 24 months). Low prestige is normal for most independents and does not drive day-to-day footfall. Not commercially urgent.

Trust Dimension — Behind the Headline

What customers see: FSA 5/5 — the top hygiene mark. Strong public signal, should be protected and surfaced.

What the data shows behind it:

SUBCOMPONENT	SCORE	STATUS	NOTE
FSA Headline Rating	10.0 / 10	Strong	Top mark — no action needed
Inspection Recency	8.5 / 10	Strong	Last inspected 5 months ago — fresh; full decay weight applies
Structural Compliance	8.0 / 10	Adequate	Premises, facilities, equipment all adequate.
Confidence in Management	7.0 / 10	Adequate	Adequate but room to strengthen systems and documentation.

Biggest lever: Confidence in Management. This is the softest of the three FSA sub-scores for The Harvest Table. Inspectors typically move this score based on documentation, staff training records, traceability and allergen handling processes. The allergen communication alert in the Operational section above is exactly the kind of signal that would depress this subcomponent at the next inspection.

Peer context: No peer has a materially stronger trust profile. The Harvest Table's +0.6 gap to peer average is driven mostly by the recent inspection date — several peers are carrying 12–18 month stale inspections.

What you can do:

1. **Document your allergen handover process** and keep a written training log for the team. Cost: an hour of management time. Upside: protects +0.5 on the Confidence in Management sub-score at next inspection.
2. **Display your 5/5 prominently** — physical sticker at entrance, on the Google Business Profile, on the website footer. Costs nothing.
3. **Do nothing** — viable. The 5/5 headline protects you with customers. The gap is competitive upside, not a critical risk.

Commercial read: This is not a revenue problem today. It is an easy, low-cost protective action. Estimated impact: protect against a future Trust score drop rather than unlock upside.

Business Health Signals

Companies House data: matched. Active company, accounts current, no director changes in the last 24 months, no outstanding compliance filings. No penalty rules triggered.

Inspection recency: last inspected ~5 months ago — well within the fresh window. No inspection-recency drag applied.

Watch List

Tripadvisor rating materially below Google (0.5 stars) [ESCALATED]

The gap between Google (4.4) and Tripadvisor (3.9) is actively filtering out one-off tourist visitors at the discovery stage. This is not a label problem — it means a real subset of customers are rating you lower than your core audience, and you do not currently have a mechanism to find out why.

Two new competitor openings within 1.2 miles in the last 90 days [NEW]

The Harvest Lodge (direct conceptual overlap) and Cleyford Tavern (broader gastropub) have both opened nearby. Neither has reached your rank yet but both are climbing faster than the local average. Track them for the next two report cycles and re-assess if either breaks the top 20 locally.

Allergen communication hedging language in two recent reviews [ESCALATED — see Operational Alerts]

Not yet a rating problem but could become one quickly. Addressing the process gap now is materially cheaper than addressing a public complaint later.

What Not to Do This Month

Pursuing editorial or awards coverage.

Low impact relative to effort this month. Your fundamentals (booking path, menu visibility, cross-platform rating gap) are the binding constraints. Awards amplify a strong proposition but do not substitute for one. Revisit in 6 months once Priorities 1 and 2 have landed.

Launching a new dish or seasonal menu.

Your current proposition is working — review themes are stable and positive. A new dish right now is a distraction from the conversion fixes that would actually move the needle.

Redesigning your website.

A website redesign is a large, slow, expensive project that will not improve any dimension in this report. The three website issues flagged (booking page depth, menu as PDF, hours consistency) can all be fixed in a single afternoon without touching the design.

Implementation Framework

4 active items for the next 4 weeks. All Priority: High unless noted.

Action 1: Add a direct booking link to your Google Business Profile

Status: New | **Priority:** High
Target date: 18 April 2026 | **Cost:** Zero | **Expected upside:** Capture 8–24 covers/week currently leaking
Owner: operations — whoever holds Google Business Profile admin access
Next milestone: Sign in to business.google.com, open the "Bookings" section, connect one of the supported booking partners (OpenTable, ResDiary, SevenRooms or Reserve with Google). Once connected, confirm the "Book" button is visible on the GBP mobile view.
Success measure: "Book" button visible when searching "The Harvest Table" on Google Maps from a phone. GBP completeness rises from 7/10 to 9/10.
Barrier diagnosis: This is a 30-minute task if you hold GBP admin access. The most common barrier is not knowing who holds access. If that's the situation, recover admin access first — see business.google.com help on claiming a listing.

Action 2: Publish your menu as crawlable HTML (not a PDF)

Status: New | **Priority:** High
Target date: 25 April 2026 | **Cost:** Low (under £200 if you pay someone; zero if your website platform supports HTML pages natively)
Owner: operations — whoever updates the website
Next milestone: Take the current menu PDF, copy the text into a new HTML page on your website titled "Menu", link it from the main navigation, link it from Google Business Profile's "Menu" field.
Success measure: A mobile user searching "the harvest table menu" sees the menu as text in the search result and in the Google knowledge panel. Tracked via GBP menu field populated and Google Search mobile preview.

Action 3: Reconcile opening hours across Google, website and Instagram

Status: New | **Priority:** High
Target date: 18 April 2026 | **Cost:** Zero
Owner: front-of-house or operations
Next milestone: Open all three channels side by side and confirm they match. Pay particular attention to bank holidays and exceptional closures. Set a weekly two-minute check in your Monday routine.
Success measure: No customer complaint about "arrived and they were closed" or "hours online were wrong" in the next 40 reviews.

Action 4: Respond to the most recent 3 Google reviews and 3 Tripadvisor reviews

Status: New | **Priority:** High
Target date: 18 April 2026 | **Cost:** Zero
Owner: front-of-house — whoever currently handles guest correspondence
Next milestone: Respond personally to the 3 most recent Google reviews (mix of positive and negative) and the 3 most recent Tripadvisor reviews. Set a weekly review-response routine — ten minutes every Tuesday.
Success measure: Response rate to recent reviews rises from 0% to 100% over the next 4 weeks. Google rating held at 4.4 or higher.

Maintenance Items (deprioritised this month)

These items are designated "do not prioritise" in the Executive Summary. They are ongoing postures, not active action items.

- **Editorial/awards pursuit** — Revisit once Priorities 1–3 have landed and the conversion fundamentals are strong enough to amplify.
- **New dish development** — No commercial urgency. Current proposition is working.

Additional Active Recommendations (deferred)

#	RECOMMENDATION	STATUS	TARGET	COST
5	Investigate Tripadvisor rating gap — sample 20 recent 3-star reviews	New	01 May 2026	Zero
6	Add 8 food-led photos to Google Business Profile	New	01 May 2026	Zero
7	Hold back 3 walk-in Sunday tables for local regulars	New	01 May 2026	Zero
8	Document allergen handover process and create printed matrix	New	25 April 2026	Low
9	Review Saturday-evening bar staffing (two complaints re wait)	New	25 April 2026	Operational only
10	Add non-alcoholic premium option to the bar (category trend)	New	01 June 2026	Low

Next-Month Monitoring Plan

These are **externally observable leading indicators** — all trackable without internal systems. Changes here signal whether actions are landing.

INDICATOR	CURRENT	WHAT MOVEMENT MEANS	SOURCE
Google star rating	4.4/5	Drop below 4.3 = experience drift; rise to 4.5 = fixes landing	Google Maps
Google review count	412	8+ new reviews/month = healthy momentum for this size venue	Google Maps
Tripadvisor rating	3.9/5	Rise to 4.0+ = gap-closing; drop = investigate urgently	Tripadvisor
Latest 5 Google reviews	Check manually	2+ negative in latest 5 = early warning of rating decline	Google Maps
GBP "Menu" field	Not populated	Populated = Action 2 complete	GBP admin
GBP booking button	Not present	Present = Action 1 complete	Google Maps mobile
Nearest competitor openings	2 new in 90 days	Check monthly for new entrants within 2 miles	Google Maps

Review date: First week of next month. All indicators are publicly observable — no operator login or internal data required.

Data Coverage & Confidence

SOURCE	STATUS	PROVENANCE	AVAILABLE
FSA Hygiene Rating	Rating 5/5	observed	Yes
Google Business Profile	4.4/5 (412 reviews)	observed	Yes

REVIEW-BY-REVIEW SUMMARY (38 DEEP-ANALYSIS REVIEWS, FIRST 25 SHOWN)

#	SOURCE	RATING	SENTIMENT	TOPICS	SNIPPET
1	Google	5	positive	Sunday Roast, Service Warmth	Sunday lunch was exceptional — best beef we've had in months
2	Google	5	positive	Sunday Roast, Value	Sticky toffee was properly good and the price felt fair
3	Google	4	positive	Service Warmth, Atmosphere	Proper village pub feel, attentive without hovering
4	Google	5	positive	Sunday Roast	The Yorkies were honestly the best thing on the table
5	Google	5	positive	Service Warmth	Emma looked after our anniversary meal beautifully
6	Google	4	positive	Food Quality, Value	Fish pie was excellent, good portion for the price
7	Google	5	positive	Atmosphere	Low ceilings and proper firelight, exactly what we wanted
8	Google	3	mixed	Bar Service, Atmosphere	Twenty minutes for two glasses of wine on a Saturday, not great
9	Google	5	positive	Sunday Roast, Service Warmth	Absolutely the best beef we've had in months, perfect crackling
10	Google	5	positive	Sunday Roast	Came for Mother's Day, the team made it feel special
11	Google	5	positive	Food Quality	Steak and ale pie was properly good, pastry held its shape
12	Google	4	positive	Value	Good value at the price, not cheap but fair
13	Google	3	mixed	Speed & Efficiency	By the time the mains arrived our toddler had completely melted down
14	Google	5	positive	Sunday Roast	Perfect crackling on the pork, gravy like you'd hope
15	Google	5	positive	Service Warmth, Atmosphere	Tom behind the bar was charming, whole place felt welcoming
16	Google	4	positive	Food Quality, Atmosphere	Sticky toffee was genuinely the best I've had out in a while
17	Google	5	positive	Sunday Roast	

#	SOURCE	RATING	SENTIMENT	TOPICS	SNIPPET
					Sunday roast with the whole family, worth the three-week wait
18	Google	2	negative	Allergen Handling	Wasn't sure if my coeliac request had been passed through to the kitchen
19	Google	5	positive	Sunday Roast, Service Warmth	Young woman with the short hair was brilliant on Sunday, genuinely kind
20	Google	4	positive	Sunday Roast	Back after six months and the roast is as good as I remember
21	Google	5	positive	Atmosphere, Service Warmth	Dog-friendly section is a huge win for us, staff made a fuss of her
22	Google	5	positive	Sunday Roast, Value	Took my parents, they're fussy, they loved it, value felt right
23	Tripadvisor	3	mixed	Bar Service	Bar was understaffed on Saturday, twenty minutes for wine, food was fine
24	Tripadvisor	4	positive	Sunday Roast, Service Warmth	Lovely Sunday lunch, service was genuinely warm, pork was the pick
25	Tripadvisor	3	mixed	Booking & Accessibility	Used to be able to walk in, now you have to book three weeks ahead

Reviews 26–38 are omitted from this summary table for brevity. The full text of every analysed review is reproduced in the Full Review Text Appendix below.

Full Review Text Appendix

Complete text of each analysed review. Provided for transparency and audit — the summary table above is the primary reference.

Review 1 | Google | 5 stars | positive | Sunday Roast, Service Warmth

> Sunday lunch at The Harvest Table was exceptional. The beef was the best we've had in months — properly rested, genuinely pink, and generous. Yorkshire puddings the size of your fist, gravy that tasted like it had been cooked down all week. Service was warm without being overfamiliar. Booked three weeks in advance, would do it again in a heartbeat.

Review 2 | Google | 5 stars | positive | Sunday Roast, Value

> Came for a family lunch and every single one of us was impressed. Sticky toffee pudding for dessert and I'm not usually a pudding person but this one was the right kind of sweet. The whole meal, with a bottle of house red, came in under forty quid a head which felt like proper value for the quality on the plate.

Review 3 | Google | 4 stars | positive | Service Warmth, Atmosphere

> Proper village pub feel. Low ceilings, flagstone floors, a real fire going. Our server was attentive without hovering — knew when to check in and when to leave us alone. Food was good rather than spectacular on this visit (we ordered from the weekday menu, not the Sunday roast they're known for) but the whole experience was easy and welcoming. Will be back for the roast.

Review 4 | Google | 5 stars | positive | Sunday Roast

> The Yorkshire puddings were honestly the best thing on the table. Light, crisp, cavernous — exactly as they should be. The beef was pink and the crackling on the pork belly for the table next door made me wish I'd ordered that instead. We'll be back with friends.

Review 5 | Google | 5 stars | positive | Service Warmth

> Emma looked after our wedding anniversary meal last weekend. She was attentive, funny, remembered what we had ordered at the start when the second round came, and genuinely seemed to care that we had a good night. These things are hard to teach. Thank you.

Review 6 | Google | 4 stars | positive | Food Quality, Value

> Fish pie was excellent — generous portion, proper fish not just cod offcuts, the mashed top was golden. Good value at the price. Only reason it's four not five is that the greens on the side were a bit overcooked. Tiny thing in the context of a good meal.

Review 7 | Google | 5 stars | positive | Atmosphere

> You walk in and immediately feel at home. Low ceilings, proper firelight, candles on the tables, that slightly uneven floor that old village pubs have. Exactly what we wanted for our visit. The food was excellent — we'll say more in a longer review later — but I wanted to mention the setting alone because it matters.

Review 8 | Google | 3 stars | mixed | Bar Service, Atmosphere

> Twenty minutes for two glasses of wine on a Saturday evening. That wasn't great. The restaurant service was fine once we were sat down, but the bar clearly needs more staff on busy evenings. Food was good, atmosphere was lovely, the wait at the bar brought it down to three stars.

Review 9 | Google | 5 stars | positive | Sunday Roast, Service Warmth

> Absolutely the best beef we've had in months, perfect crackling on the pork, and the Yorkies were honestly the best thing on the table. The whole team was genuinely warm — not scripted, not rushed, just nice people doing a good job. This is what Sunday lunch should be.

Review 10 | Google | 5 stars | positive | Sunday Roast

> Came for Mother's Day with three generations of the family. The team made it feel special without making a fuss. The roast was excellent, the kids had small portions of the same roast (not a separate kids' meal, which I appreciated), and my mum said it was the best Sunday lunch she'd had out in years. High praise from her.

Review 11 | Google | 5 stars | positive | Food Quality

> Steak and ale pie was properly good. The pastry held its shape when I cut into it (so many places serve a soup with a pastry lid on top), the filling was rich, the chips were golden. Classic pub food done properly. Would come again for this alone.

Review 12 | Google | 4 stars | positive | Value

> Good value at the price. Not cheap — expect to pay £28–£35 a head including a drink — but fair given the quality. A lot of places in the area charge more for less. We'll be back.

Review 13 | Google | 3 stars | mixed | Speed & Efficiency

> Food was lovely when it arrived. By the time the mains came out, our three-year-old had completely melted down from waiting. Fifty-five minutes between ordering and main course on a Saturday lunchtime is too long if you've got small children. Staff were apologetic and knocked the kids' meal off the bill which was generous. Three stars because the food was genuinely good, one star removed for the wait.

Review 14 | Google | 5 stars | positive | Sunday Roast

> Perfect crackling on the pork. Gravy like you'd hope. The beef was pink and tender. Sunday lunch here has become our go-to for birthdays and family visits. Nothing fancy, just proper food cooked properly.

Review 15 | Google | 5 stars | positive | Service Warmth, Atmosphere

> Tom behind the bar was charming — knew his wines, didn't talk down to us, made a proper recommendation that worked beautifully with the beef. The whole place felt welcoming in a way that isn't common anymore. A proper country pub that also happens to do serious food.

Review 16 | Google | 4 stars | positive | Food Quality, Atmosphere

> Sticky toffee was genuinely the best I've had out in a while. Came in hot, with proper ice cream (not a reluctant scoop), and the sauce was on the sticky side of sticky which is how it should be. The atmosphere was warm and easy. Knocking one star off because the starter (soup) was a bit under-seasoned but honestly a minor thing.

Review 17 | Google | 5 stars | positive | Sunday Roast

> Sunday roast with the whole family, worth the three-week wait for a table. Beef, pork and lamb all ordered at the table and every single one was excellent. My father-in-law, who is notoriously hard to please, said it was "properly done". That is as close as he comes to enthusiasm.

Review 18 | Google | 2 stars | negative | Allergen Handling

> The staff were lovely but I wasn't sure if my coeliac request had actually been passed through to the kitchen. Had to ask twice and then ask again when the gravy arrived. In the end we played it safe and I had the fish without the sauce, but it made the whole meal more anxious than it needed to be. The food was probably fine but I wouldn't bet on it — and I shouldn't have to.

Review 19 | Google | 5 stars | positive | Sunday Roast, Service Warmth

> The young woman with the short hair was brilliant on Sunday — genuinely kind, remembered my nan's name after one introduction, made sure she had a cushion and that the table wasn't too close to the door. It's the little things that turn a good meal into a memory. And the beef was, of course, excellent.

Review 20 | Google | 4 stars | positive | Sunday Roast

> Back after six months and the Sunday roast is as good as I remember. The only reason it's four and not five is the parsnips (a bit soft — small thing, but worth noting). Everything else was on form. Will continue to recommend this place as the best Sunday lunch in the area.

Review 21 | Google | 5 stars | positive | Atmosphere, Service Warmth

> Dog-friendly section is a huge win for us — we'd stopped going to a lot of the local pubs because they'd quietly stopped allowing dogs. The Harvest Table is explicit about it and the staff actively made a fuss of our lurcher, which she loved. Food was excellent too. We'll be making this our regular.

Review 22 | Google | 5 stars | positive | Sunday Roast, Value

> Took my parents up for a weekend visit and brought them here for Sunday lunch. They are both fussy eaters — for different reasons — and they both loved it. The pricing felt right for what you got, the service was warm and my dad (who never compliments anything) said it was "very good indeed" which is essentially a standing ovation.

Review 23 | Tripadvisor | 3 stars | mixed | Bar Service

> Food was fine, atmosphere was lovely, but the bar service on Saturday evening let it down. We waited twenty minutes to order drinks while visibly staff went past us without acknowledgement. When the drinks did arrive they were good and the rest of the meal was fine, but the opening impression was poor and it coloured the whole visit.

Review 24 | Tripadvisor | 4 stars | positive | Sunday Roast, Service Warmth

> Lovely Sunday lunch. The service was genuinely warm — not that forced friendliness you get in chains, just actual kindness. Pork was the pick of the roasts (the crackling was excellent) and the gravy was properly made. A village pub that takes food seriously without being precious about it.

Review 25 | Tripadvisor | 3 stars | mixed | Booking & Accessibility

> Used to be able to walk in on a Sunday, now you have to book three weeks ahead. I understand the place is popular and I want them to succeed, but it kind of breaks what made it ours as locals. Please hold back a few tables for walk-ins, even just one or two. The food when we got a table was as good as ever, hence three stars not two.

Reviews 26 through 38 are omitted from this appendix to keep the sample report readable. Real reports include the full text of every analysed review.

Appendix: How Scores Work

The overall score is a weighted composite of four headline dimensions plus a tracked prestige signal:

DIMENSION	WEIGHT	WHAT IT MEASURES
Experience	~30%	Food quality, service, ambience — from ratings, reviews and FSA food hygiene
Trust	~25%	FSA compliance record, inspection recency, management confidence
Visibility	~20%	Online discoverability — review volume, photos, profile completeness
Conversion	~15%	Operational readiness — hours, menu, reservations, delivery/takeaway
Prestige	~10%	Awards, editorial recognition (tracked, not a headline operational lever)

How scores move: Scores change when underlying data changes — new reviews, a new inspection, profile updates. The biggest levers are Experience (~30%) and Trust (~25%). Some factors decay over time even without new data (e.g. inspection recency). Peer averages shift as competitors improve or decline, so relative position can change even when your own venue is static.

Band thresholds (on the 0–10 scale):

BAND	RANGE
Excellent	8.000–10.000
Good	6.500–7.999
Generally Satisfactory	5.000–6.499
Improvement Necessary	3.500–4.999
Major Improvement	2.000–3.499
Urgent Improvement	0.000–1.999

The Harvest Table's 6.8 lands in the **Good** band, within reach of Excellent but held back by the Conversion gap.

End of sample report. The Harvest Table, Everham-on-Wye, and every score, review excerpt, competitor name and finding in this document is fictional and exists only to illustrate the format of a real DayDine Position & Competitor Report. Your real report will contain externally-verifiable data for your own venue, drawn from FSA, Google, Tripadvisor, Companies House and editorial sources.
